**labor and delivery nurse training: Birth Settings in America** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Assessing Health Outcomes by Birth Settings, 2020-05-01 The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. *Birth Settings in America: Outcomes, Quality, Access, and Choice* reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

**labor and delivery nurse training: The Future of Nursing** Institute of Medicine, Committee on the Robert Wood Johnson Foundation Initiative on the Future of Nursing, at the Institute of Medicine, 2011-02-08 *The Future of Nursing* explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession.

Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

**labor and delivery nurse training: Assessing Progress on the Institute of Medicine Report The Future of Nursing** National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Committee for Assessing Progress on Implementing the Recommendations of the Institute of Medicine Report The Future of Nursing: Leading Change, Advancing Health, 2016-03-22 Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report The Future of Nursing: Leading Change, Advancing Health, which made a series of recommendations pertaining to roles for nurses

in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP Future of Nursing: Campaign for Action and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.

**labor and delivery nurse training: Improving the Quality of Long-Term Care** Institute of Medicine, Division of Health Care Services, Committee on Improving Quality in Long-Term Care, 2001-02-27 Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

**labor and delivery nurse training: Re-Imagining the End of Life** Janet Booth, 2019-04-18 What does it mean to be prepared for the last part of our lives? One of the many lessons author and end-of-life nurse coach Janet Booth learned at the bedside of dying people is how painful it is to come unprepared to the end of life, whether it is our own or that of our loved ones. Much of the suffering we experience seems to come from our unfamiliarity with the journey at end of life and our not knowing how to prepare for it. So there is a need for a different kind of conversation about serious illness and dying in our country. Nurses are trusted professionals who are present with people through all of life's transitions. How might they take more leadership in these conversations? The purpose of this handbook is to provide nurses, coaches, and other health care professionals with opportunities for reflection and inspiration in their work. As nurses and health care professionals, many of us have seen firsthand that the process of navigating serious illness and

death within our complex health care system is often confusing, isolating, crisis-driven, and dis-heartening. What outcomes might be possible if instead: \* we reimagined the end of life as a vital, purposeful stage of human development? \* practices of healing - forgiveness, gratitude, and letting go - became essential parts of our care plans? \* wisdom instead of fear informed our challenging decision points? \* we prepared for death in order to live more fully the time that we have? \* the hard work of caregiving was sustainable and meaningful for both family and professional caregivers? In this book you will find fresh ideas, tools, and reflective practices that encourage you to explore your personal beliefs and values about aging, advanced illness, and dying. It is intended to inspire you to reimagine the end of life as a vital part of how we become fully human - a time of life that holds value, meaning, and purpose.

**labor and delivery nurse training: Compendium of Postpartum Care** Awhonn, 2020-04-10

**labor and delivery nurse training: Viral Diseases in Pregnancy** Bernard Gonik, 2012-12-06

The pregnant host is at risk for any of the viral diseases her nonpregnant counterpart acquires. Additionally, pregnancy heightens our concerns regarding specific viral diseases because of their potential for enhanced adverse effects on both maternal and fetal well-being. All too often the obstetrician relinquishes responsibility for the management of the gravida infected by a viral pathogen, and those expert in infectious diseases are confounded by the influence of pregnancy on these conditions. A major goal of this textbook is to narrow the gap between the two aforementioned management dichotomies in the virally infected pregnant woman. We are at the infancy of our understanding of viral infections in pregnancy. The current and anticipated advancements are due in large part to a burgeoning of technological achievements in the areas of immunodiagnostics, molecular biology, and pharmacotherapeutics. Our in utero diagnostic capabilities, both invasive and noninvasive, have also allowed us new opportunities to study the effects of various maternal infectious disease processes on the developing fetus. New insights have been recognized pertaining to the maternal-fetal interface, the placenta, in that this structure is now acknowledged to function as both a mechanical and an immunological barrier to vertical transmission of infection. These observations suggest that there will be an outpouring of new data in the next several years that clinicians will need to master to maintain an appropriate level of expertise in the care of their patients.

(Its) other defining feature, the husband’s active participation in the delivery, is critical to this overall goal of an intervention-free birth.”—Mothering

Pence, The author, a nurse-midwife and epidemiologist, brings together the myriad strands of history, culture, science, economics, and policy that have resulted in the current condition of maternity care in the US. **labor and delivery nurse training: Fetal Heart Rate Monitoring** Roger K. Freeman, Thomas J. Garite, Michael P. Nageotte, Lisa A. Miller, 2012-09-26 Fetal heart rate monitoring affects the lives of millions of women and infants every year in the United States alone. Used by all members of the obstetric team - nurses, students, midwives, and physicians - it is the primary method to assess fetal oxygenation in both the antepartum and intrapartum setting. Improving outcomes and promoting patient safety depends upon correct use and interpretation of fetal heart rate monitoring, and is crucial to daily obstetric practice. This fourth edition provides the obstetrical team a framework within which to interpret and understand fetal heart rate tracings and their implications. The text covers key issues as the physiological basis for monitoring, a discussion of fetal hypoxemia and neonatal encephalopathy, instrumentation and pattern recognition. In addition to an in-depth review of the standardized NICHD nomenclature and three-tiered FHR Category approach, there are chapters on intrapartum and antepartum management as well as fetal central nervous system effects on monitor patterns. Since fetal monitoring is primarily a screening tool there are also discussions on the use of backup methods for evaluation of abnormal patterns. This 4th edition also brings the addition of Lisa A. Miller CNM, JD, who provides a nursing and midwifery perspective as well an enhanced legal and risk management review. This new fourth edition includes: Review of neonatal encephalopathy and recent studies on CP Current information and discussion of most recent NICHD panel recommendations, both antepartum and intrapartum New chapter on Pitfalls in EFM Detailed chapter on risk management, liability & documentation New section on fetal maternal hemorrhage Update on new instrumentation Crucial information on maternal/fetal coincidence and FDA warnings All chapters include updated practice tips and clinical implications for the entire obstetric team Plus, with this edition clinicians have access to a companion website with full text and an image bank for fast & simplified clinical review.

**labor and delivery nurse training: Nursing and Nursing Education** Institute of Medicine, Division of Health Care Services, 1983-02-01 Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing. **labor and delivery nurse training:** The Future of Nursing 2020-2030 National Academies of Sciences Engineering and Medicine, Committee on the Future of Nursing 2020-2030, 2021-09-30 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

**labor and delivery nurse training: *A Good Birth, A Safe Birth*** Diana Korte, 1992-09-16 Based on a survey of two thousand women and responses from readers of the first and second editions, this complete and accurate guide enables women and their partners to take control of the childbirth experience. Scaer, both long-time La Leche leaders, analyze today's childbirth options and help readers to choose among them – to find Dr. Right” (or a midwife), and perhaps a labor assistant, too, and to pick a hospital, birthing center, or home birth. They describe the pros and cons of medications, fetal monitoring, induction of labor, and other medical interventions during birth, and they tell readers how to avoid an unnecessary cesarean section and ensure that all their wishes are followed. In chapters such as *If You Don't Know Your Options, You Don't Have Any*,” *The Obstetricians Black Bag of Interventions*,” and *How to Have a Normal Vaginal Birth (and Avoid an Unnecessary Cesarean)*”, Korte and Scaer are refreshingly frank but never dogmatic; they want their readers to decide for themselves what's best for them.
